The screenshot displays a JupyterLab environment with a Python notebook titled "Day11 Last Checkpoint: 23 hours ago". The notebook content is as follows:

```
from sklearn.metrics import mean_squared_error, mean_absolute_error, r2_score

#Step 2: Load dataset

data = fetch_california_housing()

X = data.data
y = data.target

#Step 3: Train-test split

X_train, X_test, y_train, y_test = train_test_split(
    X, y, test_size=0.2, random_state=42
)

#Step 4: Train model

model = LinearRegression()
model.fit(X_train, y_train)

#Step 5: Predict

y_pred = model.predict(X_test)

#Step 6: Evaluate metrics

mse = mean_squared_error(y_test, y_pred)
```

The left sidebar shows the Anaconda Toolbox with options like "Create a New Project", "Create a New Notebook", and "My Projects". The bottom status bar indicates the system temperature is 28°C and it is sunny. A Snipping Tool window is open in the bottom right corner, showing a screenshot of the notebook and the text "Screenshot copied to clipboard. Automatically saved to screenshots folder."
